Sold

REF: 7186

Height: 145 mm (5.71")

Width: 200 mm (7.87")

Weight: 216 g

Description

This charming silver bachelor teapot, redolent of the early 18th century, has a most graceful form and is in fine condition. Perfect for adorning your breakfast tray and to be used daily.

A silver teapot pours like no other and sterling silver is the perfect material for making teapots:

- No other material can be fashioned into such elegant and detailed forms, reflect light as beautifully, and a perfectly formed silver teapot spout will never drip.
- Second only to diamonds, silver has the highest thermal conductivity of any material, meaning that tea leaves can be brewed at a higher temperature than in any other teapot, allowing the tea leaves to fully release their flavours.
- That same high thermal conductivity means a silver teapot will retain heat and keep tea hot for much longer.
- Unlike porcelain and ceramic teapots, silver is sturdy and long-lasting, does not shatter and the occasional dent can be deburred.
